

The smart way to use energy.

Direct access to energy markets for industrial customers

Balancing price opportunities and market volatility

Boost your market tools with international experience

Usage of advanced market tools and pricing

Lean management in energy procurement for industrial users

Focusing on core competences with clear service concept of independent experts

Consulting services for focused and sustainable energy management

Taking responsibility into your hands for a sustainable world

Do you have the full control of your energy management?

The volume in MWh traded on the
Prague Energy Exchange in 2010:

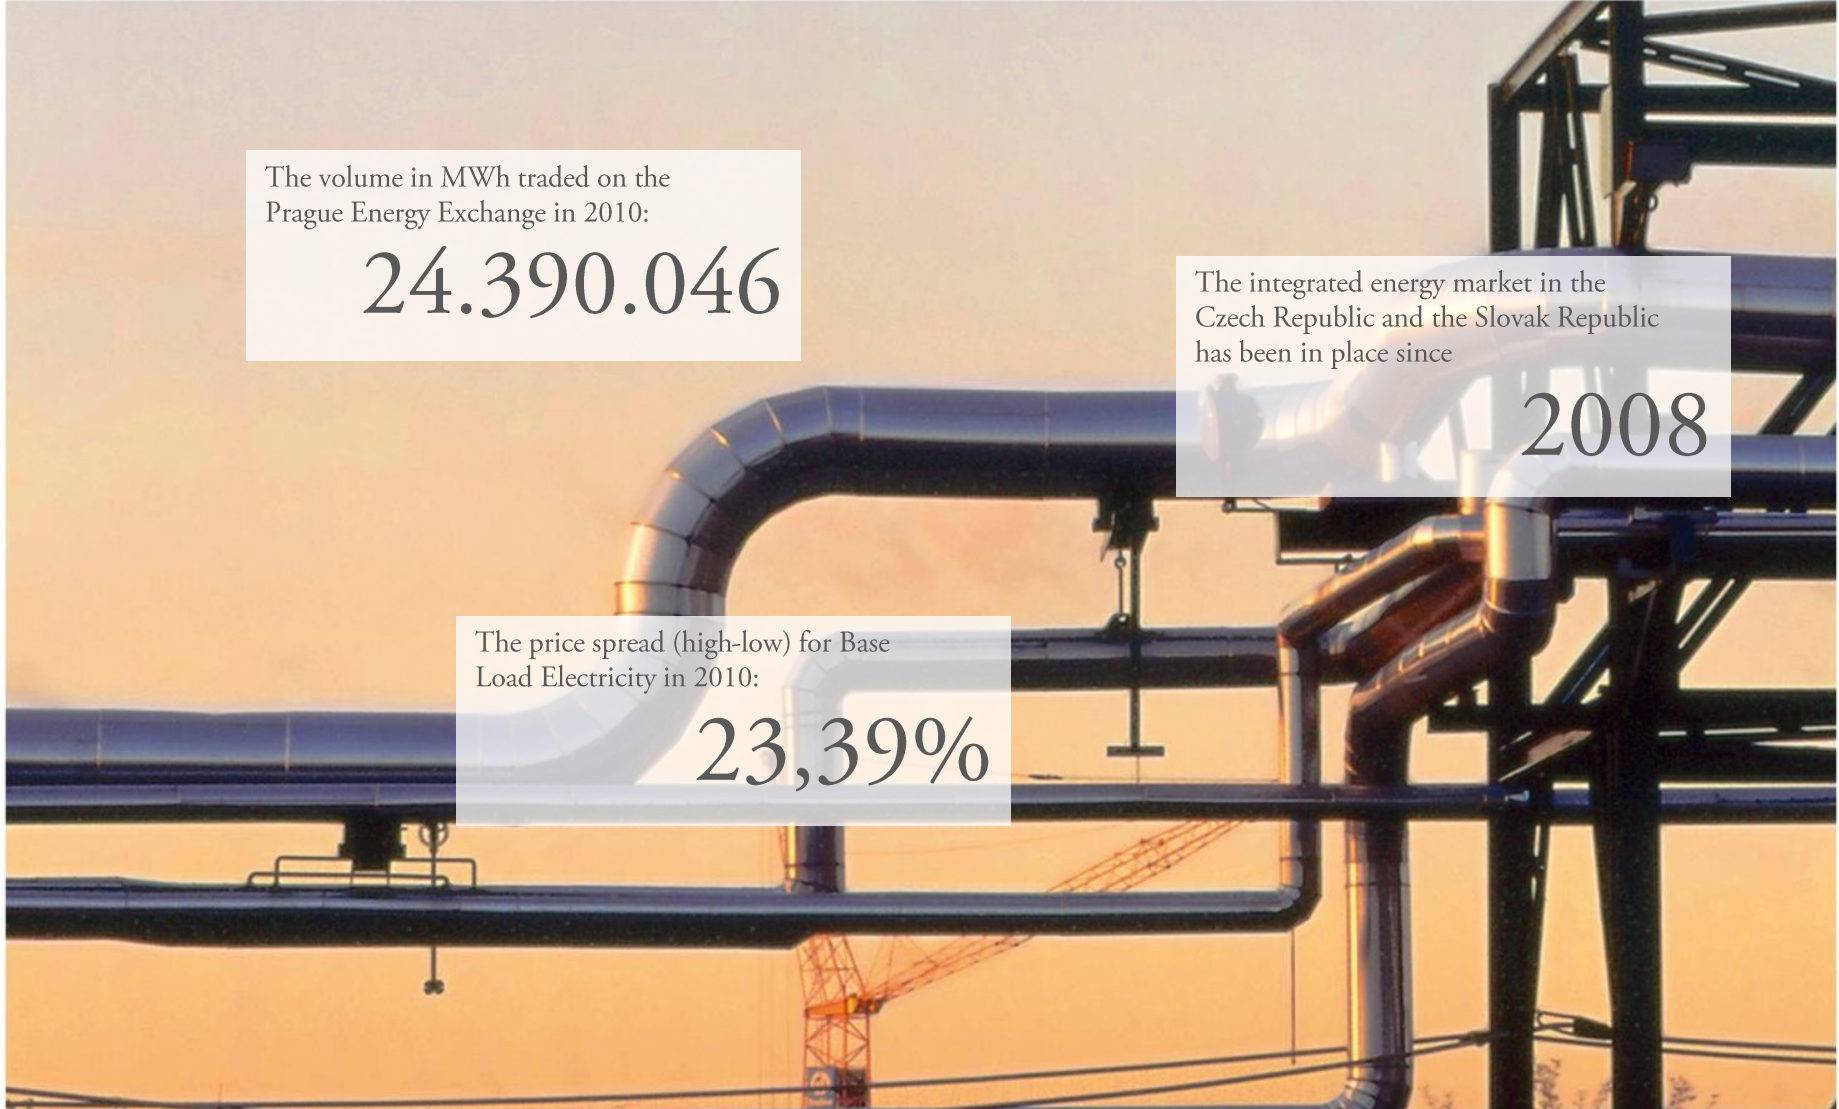

24.390.046

The integrated energy market in the
Czech Republic and the Slovak Republic
has been in place since

2008

The price spread (high-low) for Base
Load Electricity in 2010:

23,39%

The European Union expects a reduction in energy consumption by 2030 of

31%

Payback period for economically viable energy efficiency measures:

1-2 years

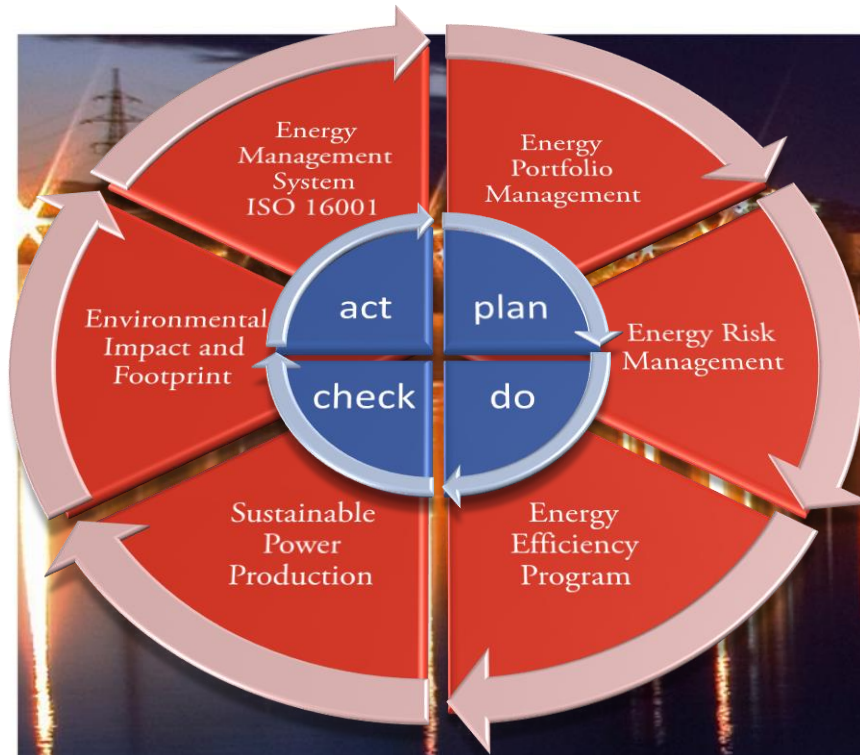

Savings potential by retrofitting the lighting systems:

~ 50%

Share of energy costs in total costs of an electric drive:

80%

Our service for your energy and efficiency.

Energy Portfolio Management

- Advise on international energy market mechanism (spot- and forward markets)
- Analyze, consult and tender of energy supply contracts
- Support energy procurement execution on the energy exchange and OTC
- Global multi-site service

Energy Risk Management

- Advice on individual risk exposure
- Consult on risk management system
- Optimize individual cost of risk
- Minimize impact from energy markets

Energy Efficiency Program

- Analyze energy consumption
- Consult efficiency policy and program
- Plan efficiency programs
- Evaluate savings potentials
- Manage efficiency projects

Environmental Impact and Carbon Footprint

- Consult for carbon management and carbon markets
- Advice in carbon reduction
- Sourcing of green energy
- Advice and trading in European Emission Trading Scheme (ETS) with CERs and EUAs

Sustainable Power Production

- Consult power production with renewables and integrated efficiency projects
- Due-diligence of renewable projects
- Engineering of power supply projects
- Project Management

Energy Portfolio Management

- Advice in international energy market mechanism (spot- and forward markets)
- Analyze, consult and tender of energy supply contracts
- Support energy procurement execution on the energy exchange and OTC
- Global multi-site services

Our Customers.

... above these projects, we are serving 1.000 customers in many industries: aerospace, airport operators, automotive, food industry, glass production, lighting, mechanical engineering, medical technology, OEMs, paper mills, power generation, public transport, public administration, retail, steel, telecommunications, utilities, ...

Schiphol (NL) - fifth largest airport in Europe

- Innovative partnership with Amsterdam Energy Exchange and Bergen Energi
- Flexibility in energy consumption
- Use of international energy prices
- Significant reduction of total energy cost

Europe's leading engineering Group

- Global energy procurement
- Unified services up to 190 global energy markets
- Global and European energy market knowledge and experience
- Global expertise in emission trading systems by Bergen Energi

One of the most globalized retail and wholesale corporation

- Global expertise in emission trading systems by Bergen Energi
- Multi-site services for streamlined energy processes
- Energy efficiency and carbon reduction plan – saving up to 15% carbon per square meter

Start using energy the smart way.

We serve and provide:

- Solutions for your energy consumption - energy efficiency and CO2 management
- Service for energy supply – Energy Portfolio Management
- Engineering planning for energy conversion/generation – sustainability in the production with renewables
- Consulting services for focused and sustainable energy management
